

ABSTRACT OF THE DISCLOSURE

A system and method for producing and coating an object that includes a manufacturing machine and an object treatment device is disclosed. The object treatment device includes a painting station for applying a coating to a surface of the object, at least an other station for treating the object, and a tape conveyor belt for moving the object between the stations. The object treatment device is provided with an enclosure with a controlled atmosphere within the enclosure. The manufacturing machine is located outside the enclosure.
